

MODEL#: TD5275
Traffic Control Products

"Absolutely, positively, **THE BEST**
flexible base in the business."

BOOMERANGTM
REBOUNDABLE BASE SYSTEM
"Takes a lickin' and keeps on stickin'."

The BOOMERANG Reboundable Base System is an ingeniously simple way to put signage in High Impact Traffic Zones. Made from advanced polymers, this base is designed to take hit after hit. It can be impacted from any direction and keeps on coming back for more. One base does all the work. It can be configured as a work zone channelizer, for permanent traffic delineation, as crosswalk in-street signage, for parking lot traffic management and as a pedestrian control device. And, with three different ways to mount the base, the BOOMERANG can work for you. It is, simply, the most cost-effective flexible traffic control product on the market today.

we got the works!!
